

DATA ANALYSIS

FOR BUSINESS, ECONOMICS, AND POLICY

20% DISCOUNT
Expires 30 September 2022

Gábor Békés, *Central European University, Vienna and Budapest*
Gábor Kézdi, *University of Michigan, Ann Arbor*

This textbook provides future data analysts with the tools, methods, and skills needed to answer data-focused, real-life questions; to carry out data analysis; and to visualize and interpret results to support better decisions in business, economics, and public policy. Data wrangling and exploration, regression analysis, machine learning, and causal analysis are comprehensively covered, as well as when, why, and how the methods work, and how they relate to each other. As the most effective way to communicate data analysis, running case studies play a central role in this textbook. Each case starts with an industry-relevant question and answers it by using real-world data and applying the tools and methods covered in the textbook. Learning is then consolidated by 360 practice questions and 120 data exercises.

Extensive online resources, including raw and cleaned data and codes for all analysis in Stata, R, and Python, can be found at www.gabors-data-analysis.com.

'This exciting new text covers everything today's aspiring data scientist needs to know, managing to be comprehensive as well as accessible. Like a good confidence interval, the Gabors have got you almost completely covered!'

Joshua Angrist, *Massachusetts Institute of Technology*

'A beautiful integration of econometrics and data science that provides a direct path from data collection and exploratory analysis to conventional regression modeling, then on to prediction and causal modeling. Exactly what is needed to equip the next generation of students with the tools and insights from the two fields.'

David Card, *University of California, Berkeley*

CONTENTS

Part I. Data Exploration:

1. Origins of data
2. Preparing data for analysis
3. Exploratory data analysis
4. Comparison and correlation
5. Generalizing from data
6. Testing hypotheses

Part II. Regression Analysis:

7. Simple regression
8. Complicated patterns and messy data

9. Generalizing results of a regression
10. Multiple linear regression
11. Modeling probabilities
12. Regression with time series data

Part III. Prediction:

13. A framework for prediction
14. Model building for prediction
15. Regression trees
16. Random forest and boosting
17. Probability prediction and classification
18. Forecasting from time series data

Part IV. Causal Analysis:

19. A framework for causal analysis
20. Designing and analyzing experiments
21. Regression and matching with observational data
22. Difference-in-differences
23. Methods for panel data
24. Appropriate control groups for panel data
